ApnoMart — Executive Insights

Prepared by Banoth Trisha | Business Intelligence Dashboard | October 2026

Metric	Result
Total sales	■16,261,998.30
Total profit	■4,419,736.17
Total orders	1,200
Weighted profit margin	27.18%

Dataset scope

The source file contains 1,200 records and 15 columns, with no missing values. Order dates range from 01 May 2026 to 28 October 2026. The assignment title specifies Q2 2026, but the supplied data covers May through October 2026; the dashboard discloses this mismatch.

Insight 1 — Revenue pattern

Furniture is the largest sales category at ■3,518,270.00, contributing 21.6% of total sales. Furniture and Office Supplies are the next two largest categories. Revenue is spread across multiple categories, so the business should avoid relying on a single category for growth.

Insight 2 — Profitability pattern

Office Supplies has the highest category profit margin (34.80%), while Electronics has the lowest (18.88%). Electronics generated ■2,957,520 in sales but ■558,395 in profit. Review discounting, supplier costs and product mix before increasing Electronics' promotional budget.

Insight 3 — Customer behavior

Corporate customers contributed the highest segment sales at ■4,311,028 across 307 orders. Cash was the most frequently used payment method, accounting for 258 orders (21.5% of orders). Maintain a focused Corporate account plan and monitor payment preferences by region.

Strategic recommendation

Protect and grow the high-margin Office Supplies category, while conducting a targeted Electronics margin review covering discount levels, supplier costs and product mix before allocating additional promotional budget. In parallel, retain a focused account plan for Corporate customers and track payment-method mix by region.

Calculation note

Weighted profit margin = total Profit ÷ total Sales = 27.18%. This is the appropriate aggregate margin KPI; it is not the simple average of the row-level Profit_Margin values.
